Software Engineering Technology

Project Experience

- **Bundleup:** Bundleup is a personalized link bundle solution, enabling users to curate and share multiple links in one centralized location. This platform simplifies online presence by directing audiences to a single URL housing all important links – from social media profiles to portfolio websites and blogs. With Bundleup, streamlining navigation and enhancing user experience is effortless. Since its launch, Bundleup has facilitated the management of over 20 link bundles, providing users with a seamless way to organize and share online content. [View the live demo here.](#)
- **Quizwave:** I Developed a dynamic quiz application using React TypeScript, allowing users to engage in interactive quizzes on various topics. I Implemented a user-friendly interface for quiz selection and navigation, providing an intuitive experience for users. [View the live demo here.](#)
- **#airaupdatesng:** Using Python and React, I developed an X bot and a corresponding website that delivers instant exchange rate updates of the Nigerian Naira. The bot provides updates on users' X timeline, while the website version offers real-time exchange rates when visited. Since its launch in March 2024, it has attracted over 5000 visitors, keeping users informed about Nigerian Naira exchange rates. [View the live demo here.](#)
